EXAM: ULTRASOUND BILATERAL LEGS VENOUS DOPPLER

HISTORY: 2 year history bilateral leg pain with swelling.

TECHNIQUE: Grayscale, color Doppler and spectral Doppler imaging were performed.

COMPARISON: None available.

FINDINGS:

Right: The common femoral, superficial femoral, and popliteal veins compress normally. They are widely patent on color and Doppler imaging. Augmentation is seen. The posterior tibial and peroneal veins are also patent on gray scale and Doppler exam.

Left: The common femoral, superficial femoral, and popliteal veins compress normally. They are widely patent on color and Doppler imaging. Augmentation is seen. The posterior tibial and peroneal veins are also patent on gray scale and Doppler exam.

IMPRESSION:

No deep venous thrombosis is seen in bilateral lower extremity veins.

End of diagnostic report for accession: 13565111
